

Summary of changes for July 1, 2008

Treatment Guideline	Change	Comments
C6 - V Tach with Pulses	Includes option for infusion of Amiodarone in Stable Ventricular Tachycardia (same dose and rate as intermittent IV push)	
N1 – Coma / ALOC	Includes repeat Narcan dose as consideration	Previously required base contact
P7 – ALOC	Includes repeat Narcan dose as consideration	Previously required base contact
P13 – Trauma Patients	Clarifies maximum Morphine dose of 10 mg	Now consistent with P14 which previously has had maximum dose listed
R1 – Airway Obstruction	Deleted reference to needle cricothyrotomy	
Medication Chart	Lists amiodarone infusion (150 mg in 100 ml NS) and lists caution that careful mixing can cause foaming	
	Deleted all references to Needle Cricothyrotomy throughout the Prehospital Care Manual
